1 Policy Statement

- 1.1 Both Students and Staff use Queen Marys University of London's (QMUL) Systems and Services to access information. This information and any associated data must be protected and only made accessible by those who are authorised to do so when required protected. One such way is by the use of Passwords and User names. This Policy ensures that passwords are set and managed in accordance with best practise to prevent unauthorised access.
- 1.2 The Policy aims to:
 - Outline the expectations of Users and guidelines for maintaining passwords.
 - Ensure the security and protection of QMUL data.
 - Implement controls to safeguard both users and support staff
 - Outline roles & responsibilities
 - Enhance communications

Disclaimer:

- 1.3 IT Services do not currently attempt to "crack" user passwords to ensure that weak passwords are identified and users are made to change them after being informed and educated on password management.
- 1.4 IT Services understands that the above policy statements are highly recommended and are recognised as good practise; however IT Services is unable to comply due to technical or resourcing constraints. IT Services supports and advocates that departments where possible should make every effort to adhere to these policy statements.

2 Scope

- 2.1 This policy is applicable to all IT account holders either studying or working at QMUL and any users who has been assigned a password in order to access data, system or services.

3 Policy Detail

- 3.1 All users must have a username and password for their personal and sole use for access to IT services. The username and password must not be shared or disclosed to anyone for any reason.
Refer to [Notes on Guidance on the Council Regulation Concerning Information Technology](#).
- 3.2 Where operating systems dictate that system admin accounts require usernames and passwords to be shared between a group of people the following measures must be in place to reduce the risk of compromising passwords:
 - Whenever any member of the group leaves the group, even if to a different appointment in the University, the password must be changed.

- Whenever possible, systems administrators shall be assigned privileges to their personal usernames that are appropriate for their role and necessary for the specific tasks that need to be carried out. This is possible on all modern systems: UNIX/Linux and modern versions of Windows can all be operated in this way.
 - Whenever possible, direct logins using the administrative accounts shall only be allowed from, a screen and keyboard directly attached to the system itself, and not via the network. The operating system shall be configured to prohibit network login attempts by any privileged account.
 - No personal account shall have administrative level access rights, a separate admin account must exist and access to this account must be controlled at all times.
- 3.3 Users are required to maintain their own passwords. They shall be provided initially with a secure temporary password, which they are forced to change immediately.
- 3.4 When choosing a password user must ensure it is strong by, including, but not limited to, the following:
- Easy to remember
 - Not based on anything that could be easily guessed using person related information, e.g. names, telephone numbers, dates or birth, vehicle registrations, etc.
 - Not consisting of words included in a dictionary, or any of the obvious methods of manipulating dictionary words like replacing letters by digits
 - Free of repeating identical all-numeric or all-alphabetic characters
 - be at a minimum 12 characters or longer
- 3.5 Users must avoid keeping a record (e.g. paper or electronic) of passwords.
- 3.6 Users must not include passwords in any automated logon process (e.g. scripts, macros etc.).
- 3.7 Users must not use the same password for College and personal purposes.
- 3.8 Users must verify their identity before being issued with a new or replacement password.
- 3.9 Passwords will be re-set in response to requests over the telephone only if there is no doubt as to the identity of the user making the request.
- 3.10 Temporary passwords must be unique and shall not be guessable.
- 3.11 Passwords must not be distributed via email except as part of an approved IT Services process.
- 3.12 Passwords must not be stored on computer systems in an unprotected form.
- 3.13 Default vendor passwords must be altered following installation of systems or software. Where possible Admin account names should also be changed.
- 3.14 IT support staff shall not request users to disclose their passwords when providing support or investigating problems
- 3.15 All users must be required to change passwords whenever there is any indication of possible system or password compromise and to report such instances to IT Services. Refer to DG 27 - IT Security Incident Management.

4 Process and Procedures

- 4.1 The associated processes and guidance documents can be found by visiting the [Password Reset Manager Tool](#).

5 Monitoring

- 5.1 It is mandatory for anyone using an IT Account or wishes to gain access to QMUL data to comply with the IT Policies and any associated procedures. Where non-compliance is identified, ITS will take appropriate action, which may result in the IT Account and associated information system access being disabled.
- 5.2 Where breaches of IT Security and or Policies are suspected or detected, they are to be reported to IT Security via the Service Desk.
- 5.3 The IT Director, in conjunction with the Risk & Governance Manager, is responsible for the; monitoring, revision and updating of this document.

6 Exceptions

- 6.1 In the event of an exception that is not addressed by this Policy. The matter will be firstly referred to the IT Lead Team (ITLT), for a decision via the Assistant Director for Student & Staff Services.
- 6.2 The ITLT will then make a decision or refer this to the IT Strategy Board (ITSB) for guidance.
